Our Services

Panels & Supplies

We sell used and new solar panels, batteries, cables, inverters and charges, solar rack/mounting structures & more.

Refurbishing

We clean usable panels and refurbish because we believe in sustainability & recycling by re-using when possible.

Safe Recycling

We partner with one of the best recycling companies to dispose of unusable solar panels.

We know the science behind the solar photovoltaic & the different elements within the solar panels. We can safely dispose of panels that may contain Silicon, Lead, Cadmium Telluride, Copper, Indium, or Gallium.

Energy Solutions & Supplies

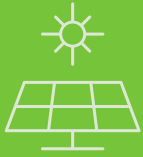

C A N D O F O R Y O U

We offer safe disposal of excess solar panels by managing logistics, transportation, and recycling, directly and with our recycling partner.

We can also provide a turnkey solution for your organization by working as a construction manager and overseeing every aspect of the process such as packaging.

Please let us know when you have any kind of used solar inventory. We would be honored to partner with you.

We are also interested in used solar panels from regular maintenance of solar plants or deinstallation of retired solar plants.

Energy Solutions & Supplies

C A S E S T U D Y

We recently worked with Southern Company (Georgia Power) to liquidate their excess/scrap inventory of approximately 60,000 solar panels.

We efficiently coordinated with the on-site crew, managed the logistics, and transported approximately 100 semi-truck loads of solar panels over the course of seven months (despite the adverse weather condition and global pandemic disruption).

We partnered with one of the nation's top glass recyclers (ISO 14001 and R2 Responsible Recycling certified) to responsibly dispose of approx. 2,000 completely damaged solar panels.

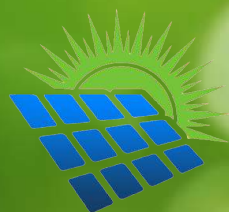

Committed to Safety

From regulating the safety of crew members and maintaining OSHA standards to transporting modules, our dedication to proper, safe disposal is our #1 strength.
